## **III. Project Information Priority Watershed Concern:** the project will address — Check *One* Only. Instream Process & Function Riparian Process & Function Urban Impact Reduction Wetland Process & Function Private Road Impact Reduction ☐ Upland Process & Function Fish Passage Water Quantity & Quality/Irrigation Efficiency Small Grant Team Priority Project Type(s) addressed by the project (list specific eligible project type): **Upland Process & Function** 1-a. Is the project consistent with the local watershed assessment or action plan? ∀es Name primary assessment/plan Umatilla/Morrow Subbasin Plan □ No N/A—The watershed does not yet have an assessment or action plan 1-b. Is the project consistent with the local Agricultural Water Quality Management Area Plan? No 1-c. Is the project consistent with any developed plan for the property (e.g., local conservation or stewardship)? | Yes If yes, name the plan(s): \_\_\_

2. Describe the current watershed PROBLEM(s) you are seeking to address.

Currently the landowners, Jake and Lara Neiffer run 48-50 cows and 550-600 chickens on their ranch just outside of Lexington, Oregon. These animals forage in a 30-acre pasture adjacent to Willow Creek where the landowner is under a current CREP contract that is due to expire in 2020. There is established riparian fencing currently and an existing water well near the landowner's house is used to supply livestock water to the pasture. The well currently has a 1 horsepower pump that shuts off and on numerous times a day. The livestock water source being so close to the well and landowner's property is causing the cows to keg up and produce buildup of inputs of fecal bacteria which is causing areas of bare soil which are conducive to wind and water erosion (see attached photo "Looking Southeast"). They also run multiple hose lines from the one well to supply the livestock water. This has many inefficiencies including the manual labor of dragging hundreds of feet of hose which can cause various leaks and operational spills. The one hydrant from the well is running at a high capacity and it has become a great cost both in money and energy. Without added off-stream watering systems Jake is considering to not renew his CREP contract which comprises of 30 acres of additional range that his cattle could use and would also allow livestock access for watering in Willow Creek which would greatly reduce his energy costs using the well.

**3. Describe the** SOLUTION(s) **you are proposing to address the current problem(s).** Attach a site map, color photo(s), and (if applicable) preliminary project drawings or designs.

The landowner plans to install 16 new hydrants adjacent to his house that would provide off-stream water to the grazing pasture using 3,250 feet of 1½" PVC pipe. 1,000 ft of pipe and 6 hydrants will be installed on the NW side of the property and 2,250 ft of pipe and 10 hydrants on the SE side (see attached ORTHO map). The 16 hydrants were chosen because they coincide with the designated 1-2 acre grazing paddocks they plan to implement with electric wire tape fence charged with solar energy. This way Jake will be able to transport the watering troughs to any one of the 16 hydrants to establish an efficient grazing paddock. He also wants to install a VFD to the pump at the well to ensure optimal pumping efficency to the added system. The deferred rest/rotation pasture paddocks will create more distributed uniform grazing to the pasture which will reduce the chances of bare soil, wind and water erosion and potential sedimentation of nearby Willow Creek. Once the cows are moved to the next paddock, they will run the chickens over the freshly foraged pasture in even smaller paddocks which helps to increase the overall fertility of the soils and plant vigor. Right now, the pasture totality is being underutilized and

susceptible to various erosion actions, but with the help of the water developments and grazing plans implemented with this project it will strengthen pasture and watershed health for years to come.

If applicable, select all the activities that are part of you submit the DAS Risk Assessment Tool for items 1-5:	r project (check all that apply). You will be required to
1. Working with hazardous materials (not including r such as hydraulic fluid)	materials used in the normal operation of equipment

We, the undersigned, attest that to the best of our knowledge the information contained in this application is true, that the proposed project is not required by a state or federal agency directive, and that the project will be completed within 24 months from the date of the team funding recommendation of the application. We understand that the submitted application is a matter of public record.

#### Also, should funding for this project be awarded we understand:

- 1) We may not incur any project expenses until all designated signatories have signed an OWEB grant agreement,
- 2) We will be required to provide proper accounting of project expenses, and
- 3) We will be required to provide necessary and normal maintenance to sustain the value of the project once it is completed.

By their signatures, the **landowner(s)** attest that they have no plans to sell their property as of the date of this application, are authorized to sign as landowner, and they agree to provide, upon prior request and at a mutually acceptable time, site access to the applicant or representatives of OWEB for a period up to two years following project completion to allow project work to be implemented, monitored, and maintained.

## Racial and Ethnic Impact Statement

This form is used for information purposes only and must be included with the grant application.

Chapter 600 of the 2013 Oregon Laws require applicants to include with each grant application a racial and ethnic impact statement. The statement provides information as to the disproportionate or unique impact the proposed policies or programs may have on minority persons<sup>1</sup> in the State of Oregon if the grant is awarded to a corporation or other legal entity other than natural persons.

aa. aca	to a corporation of other regardinary other than mataral persons.
	ne proposed grant project policies or programs could have a disproportionate or unique positive impact on the following minority persons:
	Indicate all that apply:  Women Persons with Disabilities African-Americans Hispanics Asians or Pacific Islanders American Indians Alaskan Natives
	ne proposed grant project policies or programs could have a disproportionate or unique egative impact on the following minority persons:
	Indicate all that apply:  Women Persons with Disabilities African-Americans Hispanics Asians or Pacific Islanders American Indians Alaskan Natives
	ne proposed grant project policies or programs will have no disproportionate or unique impact on inority persons.
policies of provide e I HEREBY	cked numbers 1 or 2 above, on a separate sheet of paper, provide the rationale for the existence of r programs having a disproportionate or unique impact on minority persons in this state. Further vidence of consultation with representative(s) of the affected minority persons.  CERTIFY on this day of , 20 , the information contained on this form and any nt is complete and accurate to the best of my knowledge.
	ure d Name:Jared Huddleston Jatural Resource Technician

<sup>&</sup>lt;sup>1</sup> "Minority persons" are defined in SB 463 (2013 Regular Session) as women, persons with disabilities (as defined in ORS 174.107), African-Americans, Hispanics, Asians or Pacific Islanders, American Indians and Alaskan Natives.

OWEB receives a portion of its funds from the federal government and **is required to report** how its grantees have used both federal and state funds. The information you provide in the following form will be used for federal and state reporting purposes.

Please complete all portions of the form below as they apply to your project and submit all pages (do not exclude any pages). Please provide specific values, do not enter values like "2-3" or "<100". Enter your best approximation of what the project will accomplish.

**If you have any questions,** please contact Ginger Lofftus, OWEB PCSRF Reporting Assistant, at 503-986-5372 (ginger.lofftus@state.or.us)

## **Section 1. Project Overview**

**Answer all five questions below,** even if you have answered a similar question in a previous section in the grant application.

эp	plication.
L.	Land Use Setting: CHECK ONE BOX ONLY.  Urban/Suburban/Exurban (Projects located within urban growth boundaries or rural residential areas)  Rural (Projects located outside urban growth boundaries or rural residential areas.)
2.	<b>Dominant Watershed Setting: CHECK ONE BOX ONLY. Example:</b> Your project involves managing erosion in the upland area with some erosion control extended to the riparian area. Because most of the work is to occur in the upland area, you would check <b>only</b> the Upland box below.
	<ul> <li>■ Estuary (where freshwater meets and mixes with saltwater of ocean tides.)</li> <li>■ Riparian (adjacent to a water body, within the active floodplain.)</li> <li>■ Instream (below the ordinary high-water mark or within the active channel — includes fish passage.)</li> <li>■ Upland (above the floodplain.)</li> <li>■ Groundwater (Projects that recharge groundwater or primarily affect the subsurface water table.)</li> <li>■ Wetland (areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions.</li> </ul>
3.	Total Acres Treated: 30 Total Stream Miles Treated: (do not include upstream stream miles made accessible to fish with passage improvements)
1.	<b>Project Monitoring: All OWEB funded restoration projects require post-implementation status reporting including photo point monitoring.</b> <i>Please indicate below:</i> 1) the location of the monitoring activities relative to the project, including photo point locations, 2) whether effectiveness monitoring is planned, and 3) whether additional monitoring will be conducted for this project.
	<ul> <li>4.1) Identify the location for the planned monitoring activities relative to the restoration project location. Check as many boxes as apply.</li> <li>☑ Onsite ☐ Downstream ☐ Upstream ☐ Upslope</li> </ul>
	<b>4.2)</b> Effectiveness monitoring will be conducted for this project. Please note that effectiveness monitoring cannot be funded with OWER Small Grant Funds

#	Estimate the number of <b>existing</b> screens replace	ed, repaired or modified
cfs	Estimate the cubic feet per second of flow influen	ced by <b>existing</b> screen(s) screens (to nearest 0.01 cfs)

**Fish Passage Improvement:** Projects that improve fish migration by addressing a migration barrier problem. Complete sections A-E as they apply to the proposed project. For projects that improve fish passage at road crossings complete both sections A (define the problem) and B (define the treatment). Non-road crossing improvements are reported in sections C and D. Section E should be completed for all fish passage improvement projects. Refer to the application instructions for additional information and examples.

A. Road Crossings – Define Ex	kisting Fish Passage Prob	olem
1. Culverts hindering fish passag	ge# crossi	ings
2. Bridges hindering fish passage	e # crossi	ings
3. Fords hindering fish passage	# crossi	ings
B. Road Crossings – Define th	e Fish Passage Improvei	ments to be implemented by this project
1. Culverts installed/improved - engineered bypasses (e.g. weirs	•	ing baffles inside culverts or installing/improving let to improve passage.
# crossings	str. mi with improved	l access*
<b>2. Bridge</b> s installed/improved -//directly below a bridge crossing	•	ng/improving engineered bypasses (e.g. weirs)
# crossings	str. mi with improved	I access*
3. Fords installed/improved		
# crossings	str. mi with improved	I access*
4. Road Crossings removed and	<b>not</b> replaced	
# crossings	str. mi with improved	l access*
		made more accessible above the crossing(s) the length made accessible up to that next
C. Fish Passage Barriers – Oth	er than Road Crossings	
1. Type(s) of barriers to be trea	ted/removed to improve fish	passage.
Diversion Dam		Logs
Push-up Dam		Debris
Wood or Concrete Dam		☐ Boulder/Rock Barrier (not weirs)
Weir (not associated with	a road crossing)	Landslide
Other (explain)		
<b>2.</b> # Estimate the total nu improve passage.	mber of <b>non-road</b> crossing b	parriers (listed above) to be removed or altered to

D. Fish Ladders or Engineered Bypasses (not associated with Road Crossings)
1. Fish ladders will be installed/improved
# fish ladders to be installed/improved
2. Engineered bypasses will be installed/improved. This includes weirs, rock boulder step pools, and chutes constructed/roughened in bed rock. Do not count engineered bypasses located at a road crossing to improve passage at the crossing. These types of improvements should be identified above in section B as a Road Crossing Fish Passage Improvement.
# engineered bypasses to be installed/improved
E. Fish Passage Summary Metrics
1 % Estimate the percentage of total cost of the project applied to fish passage improvements
2 mi Estimate the total stream miles that will be made more accessible in the main channel and tributaries above the project (to nearest 0.01 mile). This metric summarizes the stream miles for all of the proposed passage improvements (defined above in Sections A-D). If a barrier exists upstream of the project, report the length made accessible up to that next upstream barrier.
3# Estimate the total number of barriers (this includes road crossings, diversion dams, push up dams, wood or concrete dams, weirs, etc.) to be removed or altered to improve passage.
<b>Instream Flow:</b> Projects that maintain and/or increase the instream flow of water. Irrigation improvements that are primarily designed to improve water quality should be reported under Upland – Agriculture Management. <b>Check all proposed activities.</b>
Irrigation practice improved to increase instream flows (e.g. install diversion headgate, replace open ditches with pipes)
☐ Water flow gauges installed to measure water use
This project will dedicate instream flow.
Other (explain):
% Estimate the percentage of total cost of the project applied to instream flow activities
mi. Estimate the miles of stream where increased flow is the result of decreased/eliminated water withdrawals
cfs Estimate the increase in flow of water in the stream as a result of conservation effort (cubic feet per second)
mm/dd/yyyy Initial start date of irrigation practice improvement
mm/dd/yyyy Final end date of irrigation practice improvement (if improvement is permanent enter 12/31/9999)
mm/dd/yyyy Water lease/agreement initial start date of no withdrawal
mm/dd/yyyy Water lease/agreement final end date of no withdrawal (if lease/agreement is permanent, enter 12/31/9999)

Instream Ha activities.	<b>bitat:</b> Projects that are designed to improve instream habitat conditions. <b>Check all proposed</b>
	el reconfiguration and connectivity (e.g., creating instream pools, meanders, improving floodplain ctivity, off-channel habitat, removal or alteration of levee or berm, removal of sediment)
Spawni	ng gravel placement
Channe	el structure - large wood placement
Plant R	emoval/control (instream) List scientific names of plants
Channe	el structure - boulder placement
Carcass	or nutrient placement:  salmonid carcass; fish meal brick; other nutrient
	el structure placement ( <b>other</b> than large wood or boulder placements), e.g., engineered structures ectors, barbs, weirs, etc.
Other (	explain):
	bank stabilization through resloping and/or placing rocks, logs (e.g. revetments, gabions, barbs), engineering on streambank
% E	Estimate the percentage of total cost of the project applied to instream habitat activities
mi. l	Estimate the miles of stream to be treated with instream habitat treatments (to nearest 0.01 mile)
	Estimate the percentage of insteam activity costs for carcass or nutrient placements. If you do not select carcass/nutrient placements as an instream activity, leave this value blank.  Example: Your project will place salmon carcasses. You estimated that 25% of the total project cost will apply to instream habitat activities and one half of the instream improvements costs will apply to the carcass placement, you would report 50%.
the stream. C	<b>bitat:</b> Projects above the ordinary high-water mark of the stream and within the floodplain of heck all proposed activities.  In planting
= .	tive/noxious plant control
	n exclusion fencing
= .	tion management (e.g. prescribed burnings, stand thinning, stand conversions, silviculture)
Livesto	ck exclusion by means other than fencing (includes placing obstacles to exclude livestock, people, es, etc., but not for individual plant protection)
Debris/	structure removal (OWEB funds cannot be used for general trash removal)
☐ Water {	gap development (fenced livestock crossing or livestock bridge)
	explain): DO NOT report livestock water developments here, report livestock water pments under upland habitat treatments.
%	Estimate the percentage of total cost of the project applied to riparian habitat activities
ac.	Estimate the acres of riparian habitat to be planted (to nearest 0.1 acres)
ac.	Estimate the acres of riparian habitat to be treated for non-native/noxious weeds (to nearest 0.1 acres)
ac.	Estimate the total riparian acres to be treated. (to nearest 0.1 acres)
mi.	Estimate the miles of riparian streambank to be treated (to nearest 0.01 mi).
Stream sides t	reated 1 2 (Do not double count miles if a second side is treated)

Upland Habitat: Projects implemented above the floodplain. Check all proposed activities.
Planting/seeding for erosion control (e.g., convert from crops to native vegetation, plant area where no native/noxious weeds removed, grassed waterways, windbreaks, filter strips) List scientific names of plants
Livestock Manure Management (e.g., feedlot improvements to reduce runoff, relocate/improve manusholding structures and manure piles to reduce/eliminate drainage into streams)
Slope stabilization (e.g., grade stabilization, landslide reparation, terracing slopes)
Upland Livestock Management (other than livestock water developments), e.g., grazing plans, fencing
Non-native/noxious plant control List scientific names of plants:
Restore Historic Upland Habitats (e.g. oak woodland, oak savannah, upland prairie restoration)
☐ Juniper removal/control
Vegetation Management (other than non-native/noxious plant control or juniper removal, e.g. tree thinning, brush control, burning) List scientific names of plants:
Erosion control structures not already reported under Upland Agriculture Management or Road Draina System and Surface Improvements.
<ul> <li>Upland Agriculture Management (e.g., no/low-till, wind breaks, filter strips, crop rotation, terracing, water and sediment control basins, grade stabilization and irrigation improvements)</li> <li>Other (explain):</li> </ul>
100 % Estimate the percentage of total cost of the project will apply to upland habitat activities
16 # Estimate the number of livestock/wildlife water developments
ac. Estimate the acres of upland habitat to be treated for non-native/noxious plants (to nearest 0.1 acres)
ac. Estimate the total acres of upland habitat to be treated (do not include acres of upland habitat affected by livestock water developments (to nearest 0.1 acres)
Estimate the percentage of upland activity costs applied to Livestock Manure Management. If yo do not select Livestock Manure Management as an upland activity, leave this value blank. Example: Project will relocate a feedlot to reduce livestock manure runoff. You estimated that 33 of the total project cost will apply to upland habitat activities and one half of the upland improvements costs will apply to the feedlot relocation, you would report 50%.
Road Activities: Projects designed to improve road impacts to watersheds. Check all proposed activities.
Road drainage system and surface improvements & reconstruction
Other (explain):
Road closure, relocation, obliteration (decommissioning)
% Estimate the percentage of total cost of the project applied to road activities
mi. Estimate the miles of road treated (to nearest 0.01 mile)

<b>Urban Impa</b>	act Reduction: Check all of the u	ban impact related activities that will be used by this project.
Biosward Pestical Deten	reduction: list names of each toxic soles vales cide reduction: list names of each pest nation Facility nwater/wastewater modification or to curban impact reduction (explain):	reatment (includes rain gardens)
		dressed by the Urban Impact Reduction activities selected by other types of restoration activities.
<del></del>	ides Toxics ents Sediment (explain):	Dxygen Heavy Metals  High Temperature  of the project applied to urban impact activities
Wetland H	abitat: Projects designed to create	or improve wetland areas. Check all proposed activities.
Artific	and planting  cial wetland area created from  ea not formerly a wetland	Non-native/noxious/invasive plant control Wetland improvement/restoration of existing or historic wetland (other than vegetation planting or removal) Other (explain):
%	Estimate the percentage of total c	ost of the project applied to wetland habitat activities
ac. n	Estimate the acres of wetland hab nearest 0.1 acres)	itat to be treated for non-native/noxious/invasive plants (to
ac.	Estimate the acres of artificial wet	land created (to nearest 0.1 acres)
ac.	Estimate the total acres of wetland	d habitat (existing or historic) treated (to nearest 0.1 acres)
	Habitat: Projects that result in improposed activities.	ovement or increase in the availability of estuarine habitat.
Estuar	rine planting native/noxious plant control	Channel modification/creation (e.g., improve intertidal flow to existing estuarine habitat)
<u>—</u>	or berm modification/removal rine culvert	Creation of new estuarine habitat where one did not exist previously by methods other than tidegates or dikes
modif	fication/removal  oval of existing fill material  sion devices	Placement of fill material (for proper terrestrial function)  Other (explain):
<u> </u>	Estimate the percentage of total co	st of the project applied to estuarine habitat activities
	-	itat to be treated for non-native/noxious plants (to nearest 0.1
ac.	Estimate the total acres of estuarin acres)	e habitat (existing or historic) to be treated (to nearest 0.1

### Section 3.

Salmon/Steelhead Populations Targeted and Expected Benefits to Salmon/Steelhead
The information provided will be used by OWEB better to meet federal and state reporting requirements.
Completion of this section is required but will not be used to evaluate this application for funding.

This project is **NOT** specifically designed to benefit salmon or steelhead.

► If you check this box, STOP here.

**Targeted Salmon/Steelhead Populations**: Select one or more of the salmon ESUs (Evolutionary Significant Unit) or steelhead DPSs (Distinct Population Segment) that the project will address/benefit. For species where the ESU/DPS name is not known or determined, use the species name with unidentified ESU (e.g., Chinook salmon – unidentified ESU). Additional information on the designation and location of the salmon/steelhead populations can be found at:

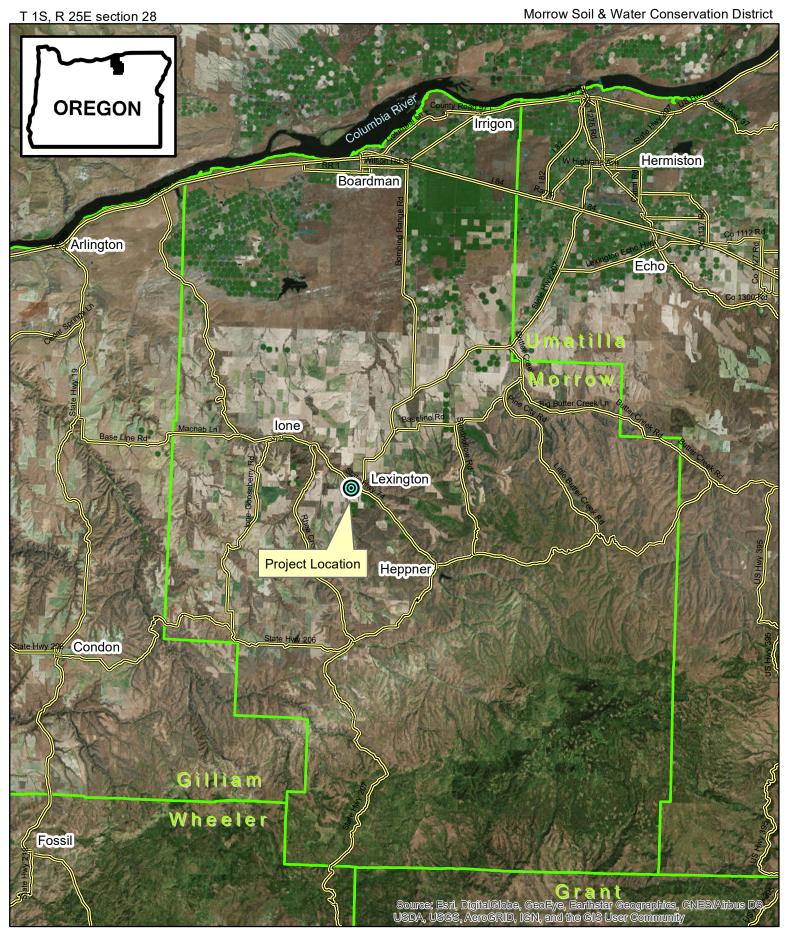

https://www.westcoast.fisheries.noaa.gov/maps\_data/species\_population\_boundaries.html

Chinook Salmon (Oncorhynchus tshawytscha)	Coho Salmon (O. kisutch)		
Deschutes River summer/fall-run ESU	Lower Columbia River ESU		
Lower Columbia River ESU	Oregon Coast ESU		
Mid-Columbia River spring-run ESU	Southern Oregon/Northern California ESU		
Oregon Coast ESU	unidentified ESU		
Snake River Fall-run ESU	Steelhead (O. mykiss)		
Southern Oregon and Northern California Coastal ESU	Klamath Mountains Province DPS		
Upper Klamath-Trinity Rivers ESU	Snake River Spring/Summer-run ESU		
Upper Willamette River ESU	Lower Columbia River DPS		
unidentified ESU	Middle Columbia River DPS		
_	Oregon Coast DPS		
Chum Salmon (O. keta)	Snake River Basin DPS		
Columbia River ESU	Washington Coast DPS (SW Washington)		
Pacific Coast ESU	Upper Willamette River DPS		
unidentified ESU	Steelhead/Trout unidentified DPS		
Expected Benefits: Write a brief description of the goals and purpose of the project and how it is			

expected to benefit salmon/steelhead or salmon/steelhead habitat. See Application Instructions for

helpful examples.
