III. Project Information

Priority Watershed Concern: the project will address — Check One Only.	
--	--

Instream Process & Function 🛛 Riparian Process & Function 🗌 Urban Impact Reduction

Upland Process & Function

Wetland Process & Function	Private Road Impact Reduction
----------------------------	-------------------------------

Water Quantity & Quality/ Irrigation Efficiency

Small Grant Team Priority Project Type(s) addressed by the project (list specific eligible project type): <u>Riparian Process and Function - Manage Nutrient and Sediment Inputs - Managed Grazing (Fencing and</u> <u>developing off-channel watering) and Water Quality/Irrigation Effeciency - Implement Irrigation Practices</u> <u>that result in decreased water use, and increased instream flow, increased groundwater level, or improved</u> <u>water quality - install drip or sprinkler systems</u>

1-a. Is the project consistent with the local watershed assessment or action plan?

Yes Name primary assessment/plan Umatilla/Willow Subbasin Pl	🛛 Yes	Name primary	assessment/plan	<u>Umatilla,</u>	/Willow	Subbasin	Plar
--	-------	--------------	-----------------	------------------	---------	----------	------

🗌 No

Fish Passage

□ N/A—The watershed does not yet have an assessment or action plan

1-b. Is the project consistent with the local Agricultural Water Quality Management Area Plan?

🛛 Yes 🗌 No

1-c. Is the project consistent with any developed plan for the property (e.g., local conservation or stewardship)?

	Yes		No
د		 م ما ـ	

If yes, name the plan(s): _____

2. Describe the current *watershed* **PROBLEM**(s) you are seeking to address.

The landowner currently runs cows and horses in the various pastures on the property. Currently, the livestock have access to the Umatilla River along a 700 foot stretch. With this access, unneccesary sediment and nutrient inputs can runoff into the Umatilla River. The Umatilla River is an EFH listed stream, supporting both salmon and steelhead. The Umatilla is a direct tributary into the Columbia River. In addition, the landowner currently irrigates his southwest pasture from a diversion from the Umatilla River. The landowner currently uses wheel line, which can be inefficent due to the leaks that system is often plagued with. This system currently uses more water from the Umatilla than what is necessary.

Describe the SOLUTION(s) you are proposing to address the current problem(s). Attach a site map, color photo(s), and (if applicable) preliminary project drawings or designs.

By fencing off the riparian area and preventing livestock from accessing the stream, nutrient and sediment inputs will be greatly reduced. Cross-fencing will also be included to help the landowner's grazing operation. Also, by converting a portion of the handline to a solid set system that will connect with the existing wheelline, the system may become more efficient. Converting from handline with leaky joints to a buried PVC with risers will prevent loss of water and pressure over the 400 feet that the landowner currently transports the water from his pump to his irrigated pasture.

4. Insurance Information

If applicable, select all the activities that are part of your project (check all that apply). You will be required to submit the DAS Risk Assessment Tool for items 1-5:

1. Working with hazardous materials (not including materials used in the normal operation of equipment such as hydraulic fluid)

2. Earth moving work around the footprint of a well

3. Aerial application of chemicals

4. Transporting individuals on the water

5. Removal or alteration of structures that hold back water on land or instream including dams, levees, dikes, tidegates and other water control devices (this does not include temporary diversion dams used solely to divert water for irrigation)

6. Applicant's staff or volunteers are working with kids related to the project (DAS Risk assessment tool not required, additional insurance *is* required)

7. Applicant's staff are applying herbicides or pesticides (DAS Risk assessment tool not required, additional insurance *is* required

OWEB considers these projects to carry a greater risk to the organization, organization's employees, volunteers, and the community. If boxes 1-5 are checked above, the applicant must submit the DAS Risk Assessment, https://www.oregon.gov/das/Risk/Pages/CntrctrInsReq.aspx, with this application. Additional information regarding the insurance policy and requirements can be found in the OWEB's Budget Categories: Definitions & Policies document available on the OWEB website.

5. Technical Guidance Source (check at least one and identify the Practice Code, or page and paragraph).

🛛 NRCS Field Office Technical Guide	Guide to Placing Large Wood in Streams
Practice Code <u>382, 614, 516, 430, 443</u>	Page # / Para
Oregon Road/Stream Crossing Restoration	Forest Practices Tech Note #4
Guide	Page # / Para
Page # / Para	Forest Practices Tech Note #5
Nonpoint Source Pollution Control Guidebook	Page # / Para
Page # / Para	Tribal Natural Resource Plans and Water Plans
Urban Subwatershed Restoration Manual	(attach the relevant page or pages)
Page # / Para	

6. Maintenance and Post-Implementation Monitoring

a) Project maintenance is the responsibility of the landowner. What aspects of the project will be maintained? (See application instructions.)

Who will maintain? John Collins

What will be maintained? Fencing, trough, livestock pipeline, irrigation system

How will it be maintained? Visual verification

of years, # of times/year As needed

b) Post-implementation monitoring including photo points and visual inspection is *required* for small grants (Year-Two Status Report). What (if any) *additional* aspects of the project will be monitored post-implementation? (See application instructions)

Who will monitor?

What will be monitored?

Site monitoring protocols?

of years, # of times/year

7. Who will be responsible for writing the Year-Two Status Report?

Organization: Umatilla County SWCDName: Kyle WaggonerMailing Address: 1 SW Nye Ave Ste 130Zip: 97801Phone: 541-278-8049 ext. 138Email: umcoswcd@eotnet.net

8. Have the required permits been obtained for the project? Yes No Not Required If yes, what permits have been issued? (Attach copies)

If no, what permits must be obtained and by when? <u>CTUIR Land Use Permit, before implementation</u> CTUIR Water Resource Permit, before implementation

9. Is this project required as a condition of a local, state, or federal permit, order, or enforcement action (e.g., a manure storage and management project required by ODA permit)?

_____ Yes <u>x</u> No

10. Project Partners. Show all anticipated funding sources, and indicate the dollar value for cash or in-kind contributions. Be sure to provide a dollar value for each funding source. If the funding source is providing in-kind contributions, briefly describe the nature of the contribution in the Funding Source Column. In the Amount/Value Column, provide a total dollar amount or value for each funding source.

Funding Source	Cash	In-Kind	Amount/
Name the partner and contribution			Value
OWEB:	15,000		15,000
Landowner:		18,722	18,722
Total Estimated Funds (add all amounts in the far right column)			\$33,722

The total should equal the total cost of the project on page 1

11. Project Budget (Word). Itemize projected costs for each budget category that apply to your project. A minimum of 25% match is required. See application instructions and additional team conditions for further guidance.

PLEASE NOTE: Budgets may be submitted in either Word or Excel formats. Documents can be found on the OWEB Forms webpage.

Fill in the amounts, rounded to the nearest dollar; do not include cents.

Expense Category	No. of Units	Unit Cost	OWEB Funds	Match Funds (In-Kind/Cash)	Description what will be purchased and by whom/who will perform the work.

We, the undersigned, attest that to the best of our knowledge the information contained in this application is true, that the proposed project is not required by a state or federal agency directive, and that the project will be completed within 24 months from the date of the team funding recommendation of the application. We understand that the submitted application is a matter of public record.

Also, should funding for this project be awarded we understand:

1) We may not incur any project expenses until all designated signatories have signed an OWEB grant agreement,

2) We will be required to provide proper accounting of project expenses, and

3) We will be required to provide necessary and normal maintenance to sustain the value of the project once it is completed.

By their signatures, the **landowner(s)** attest that they have no plans to sell their property as of the date of this application, are authorized to sign as landowner, and they agree to provide, upon prior request and at a mutually acceptable time, site access to the applicant or representatives of OWEB for a period up to two years following project completion to allow project work to be implemented, monitored, and maintained.

Applicant	Date
Landowner	Date
Fiscal Agent	Date

Attachment Checklist

Project location map (Required)

Color photographs of site (Required)

Site drawings/diagrams (if applicable)

_Juniper Checklist (if applicable)

Cooperative agreement, if 2 or more landowners (Optional) May be submitted in lieu of ALL Landowner signatures on Application ALL Landowners must sign the Grant Agreement

Racial and Ethnic Impact Statement (Required)

Restoration Metrics form (Required)

Other materials (as required by team)

Optional Forms at time Application

(Required at the time of Request for Release of Funds, see instructions)

Irrigation Efficiency

Culvert/Stream Crossing

Secured Match

Land Use

Racial and Ethnic Impact Statement

This form is used for information purposes only and must be included with the grant application.

Chapter 600 of the 2013 Oregon Laws require applicants to include with each grant application a racial and ethnic impact statement. The statement provides information as to the disproportionate or unique impact the proposed policies or programs may have on minority persons¹ in the State of Oregon if the grant is awarded to a corporation or other legal entity other than natural persons.

1. The proposed grant project policies or programs could have a disproportionate or unique **positive** impact on the following minority persons:

Indicate all that apply:

___ Women

Persons with Disabilities

- African-Americans
- Hispanics
- Asians or Pacific Islanders
- American Indians
- Alaskan Natives
- 2. The proposed grant project policies or programs could have a disproportionate or unique **negative** impact on the following minority persons:

Indicate all that apply:

Women
Persons with Disabilities
African-Americans
Hispanics

- Asians or Pacific Islanders
- American Indians
- Alaskan Natives
- 3. The proposed grant project policies or programs **will have no** disproportionate or unique impact on minority persons.

If you checked numbers 1 or 2 above, on a separate sheet of paper, provide the rationale for the existence of policies or programs having a disproportionate or unique impact on minority persons in this state. Further provide evidence of consultation with representative(s) of the affected minority persons. I HEREBY CERTIFY on this Sixteenthday of September, 2019, the information contained on this form and any attachment is complete and accurate to the best of my knowledge.

Signature Printed Name:Kyle Waggoner Title:District Manager

¹ "Minority persons" are defined in SB 463 (2013 Regular Session) as women, persons with disabilities (as defined in ORS 174.107), African-Americans, Hispanics, Asians or Pacific Islanders, American Indians and Alaskan Natives.

OWEB receives a portion of its funds from the federal government and **is required to report** how its grantees have used both federal and state funds. The information you provide in the following form will be used for federal and state reporting purposes.

Please complete all portions of the form below as they apply to your project and submit all pages (do not exclude any pages). Please provide specific values, do not enter values like "2-3" or "<100". Enter your best approximation of what the project will accomplish.

If you have any questions, please contact Ginger Lofftus, OWEB PCSRF Reporting Assistant, at 503-986-5372 (ginger.lofftus@state.or.us)

Section 1. Project Overview

Answer all five questions below, even if you have answered a similar question in a previous section in the grant application.

1. Land Use Setting: CHECK ONE BOX ONLY.

Urban/Suburban/Exurban (Projects located within urban growth boundaries or rural residential areas) Rural (Projects located outside urban growth boundaries or rural residential areas.)

2. Dominant Watershed Setting: CHECK ONE BOX ONLY. Example: Your project involves managing erosion in the upland area with some erosion control extended to the riparian area. Because most of the work is to occur in the upland area, you would check only the Upland box below.

Estuary (where freshwater meets and mixes with saltwater of ocean tides.)

Riparian (adjacent to a water body, within the active floodplain.)

Instream (below the ordinary high-water mark or within the active channel — includes fish passage.) **Upland** (above the floodplain.)

Groundwater (Projects that recharge groundwater or primarily affect the subsurface water table.)

Wetland (areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions.

3. Total Acres Treated: <u>17.1</u> Total Stream Miles Treated: <u>40</u>

(do not include upstream stream miles made accessible to fish with passage improvements)

4. Project Monitoring: All OWEB funded restoration projects require post-implementation status reporting including photo point monitoring. *Please indicate below:* 1) the location of the monitoring activities relative to the project, including photo point locations, 2) whether effectiveness monitoring is planned, and 3) whether additional monitoring will be conducted for this project.

4.1) Identify the location for the planned monitoring activities relative to the restoration project location. Check as many boxes as apply.

Onsite

Downstream

Upstream

Upslope

4.2) Effectiveness monitoring will be conducted for this project. Please note that effectiveness monitoring cannot be funded with OWEB Small Grant Funds.

4.3) Will this project conduct monitoring activities bey reporting and photo point monitoring?	ond the required post-implementation status			
Yes X No If you answer yes, select the monitoring activities below, if you answer no proceed to Section 2.				
Check all proposed monitoring activities				
Adult Fish: presence/absence/abundance/	Water quality			
distribution survey(s)	Macroinvertebrates			
Spawning surveys	Water quantity			
Juvenile Fish: presence/absence/abundance/	Noxious weed (Presence/Absence)			
distribution survey(s)	Photo Points			
Upland vegetation (Presence/Absence)	Riparian vegetation (Presence/Absence)			
Instream Habitat surveys	$\square \text{ Other (evaluar)}$			

Other (explain):

Section 2. Project Activities

Provide values for each Project Activity applicable to your application. Leave blank any Project Activity or metric line that is not appropriate to your application. All data entered in this form should be what you plan to do with the project. Data about **completed** projects will be reported at the end of the project to the Oregon Watershed Restoration Inventory (OWRI). For each activity type where you enter metrics, estimate the percentage of the total cost of the project (OWEB and all other funding sources, shown in III. 9. of this application) that applies to the activity. The sum of all of the activity cost percentages should equal 100%. Please distribute all administrative, project management and other general project costs among the various project activities when estimating percentages.

Example: A project will remove a fish passage barrier, place large boulders instream, and plant a riparian buffer. You would enter the appropriate metrics into the Fish Passage, Instream Habitat, and Riparian Habitat activity sections of this form. Then, estimate the percentage of the total cost of the project for each activity. For instance: 20% towards Fish Passage activities, 25% towards Instream Habitat activities, and 55% towards Riparian Habitat activities.

Fish Screening Projects: Projects that result in the installation or improvement of screening systems that prevent fish from passing into areas that do not support fish survival, for example, into irrigation diversion channels.

Note: OWEB funds cannot be used for fish screening projects

% Estimate the percentage of total cost of the project applied to fish screening activities

New Fish Screens Installed

- ____ # Estimate the number of **new** screens installed (do not count diversions where existing screens are replaced)
- cfs Estimate the cubic feet per second of flow influenced by **new** screen(s) installed (to nearest 0.01 cfs)

Existing Screens Replaced, repaired or modified

- # Estimate the number of existing screens replaced, repaired or modified
- cfs Estimate the cubic feet per second of flow influenced by **existing** screen(s) screens (to nearest 0.01 cfs)

Fish Passage Improvement: *Projects that improve fish migration by addressing a migration barrier problem.* Complete sections A-E as they apply to the proposed project. For projects that improve fish passage at road crossings complete both sections A (define the problem) and B (define the treatment). Non-road crossing improvements are reported in sections C and D. Section E should be completed for all fish passage improvement projects. Refer to the application instructions for additional information and examples.

A. Road Crossings – Define Existing Fish Passage Problem

1. Culverts hindering fish passage	# crossings
2. Bridges hindering fish passage	# crossings
3. Fords hindering fish passage	# crossings

B. Road Crossings – Define the Fish Passage Improvements to be implemented by this project

1. Culverts installed/improved -*Improvements include* installing baffles inside culverts or installing/improving engineered bypasses (e.g. weirs) directly below a culvert outlet to improve passage.

_____ # crossings ______ str. mi with improved access*

2. Bridges installed/improved -*Improvements include* installing/improving engineered bypasses (e.g. weirs) directly below a bridge crossing to improve passage.

_____ # crossings ______ str. mi with improved access*

3. Fords installed/improved

_____ # crossings ______ str. mi with improved access*

4. Road Crossings removed and not replaced

____ # crossings ______ str. mi with improved access*

* Estimate stream miles in the main channel and tributaries made more accessible above the crossing(s) (to nearest 0.01 mile). If a barrier exists upstream, report the length made accessible up to that next upstream barrier.

C. Fish Passage Barriers – Other than Road Crossings

1. Type(s) of barriers to be treated/removed to improve fish passage.

Diversion Dam	Logs
Push-up Dam	Debris
Wood or Concrete Dam	Boulder/Rock Barrier (not weirs)
Weir (not associated with a road crossing)	Landslide

Other (explain) _____

2._____ # Estimate the total number of **non-road** crossing barriers (listed above) to be removed or altered to improve passage.

D. Fish Ladders or Engineered Bypasses (not associated with Road Crossings)

1. Fish ladders will be installed/improved

____ # fish ladders to be installed/improved

2. Engineered bypasses will be installed/improved. This includes weirs, rock boulder step pools, and chutes constructed/roughened in bed rock. Do not count engineered bypasses located at a road crossing to improve passage at the crossing. These types of improvements should be identified above in section B as a Road Crossing Fish Passage Improvement.

_____ # engineered bypasses to be installed/improved

E. Fish Passage Summary Metrics

- **1.**____% Estimate the percentage of total cost of the project applied to fish passage improvements
- **2.** mi Estimate the total stream miles that will be made more accessible in the main channel and tributaries above the project (to nearest 0.01 mile). *This metric summarizes the stream miles for all of the proposed passage improvements (defined above in Sections A-D). If a barrier exists upstream of the project, report the length made accessible up to that next upstream barrier.*
- **3.** _____# Estimate the total number of barriers (this includes road crossings, diversion dams, push up dams, wood or concrete dams, weirs, etc.) to be removed or altered to improve passage.

Instream Flow: Projects that maintain and/or increase the instream flow of water. Irrigation improvements that are primarily designed to improve water quality should be reported under Upland – Agriculture Management. **Check all proposed activities.**

Irrigation practice improved to increase instream flows (e.g. install diversion headgate, replace open ditches with pipes)

Water flow gauges installed to measure water use

This project will dedicate instream flow.

	Other	(expl	lain):	
--	-------	-------	--------	--

- _% Estimate the percentage of total cost of the project applied to instream flow activities
- ___ mi. Estimate the miles of stream where increased flow is the result of decreased/eliminated water withdrawals
- cfs Estimate the increase in flow of water in the stream as a result of conservation effort (cubic feet per second)
- _____ mm/dd/yyyy Initial start date of irrigation practice improvement
- _____ mm/dd/yyyy Final end date of irrigation practice improvement (if improvement is permanent enter 12/31/9999)
- _____ mm/dd/yyyy Water lease/agreement initial start date of no withdrawal

_____ mm/dd/yyyy Water lease/agreement final end date of no withdrawal (if lease/agreement is permanent, enter 12/31/9999)

Instream Habitat:	Projects that are designed to improve instream habitat conditions.	Check all proposed
activities.		

Channel reconfiguration and connectivity (e.g., creating instrean connectivity, off-channel habitat, removal or alteration of levee	
Spawning gravel placement	
Channel structure - large wood placement	
Plant Removal/control (instream) List scientific names of plants	
Channel structure - boulder placement	
Carcass or nutrient placement: salmonid carcass; fish mo	eal brick; 🔲 other nutrient
Channel structure placement (other than large wood or boulder or deflectors, barbs, weirs, etc.	placements), e.g., engineered structures
Other (explain):	
Streambank stabilization through resloping and/or placing rocks, or bioengineering on streambank	, logs (e.g. revetments, gabions, barbs),
% Estimate the percentage of total cost of the project applie	ed to instream habitat activities
mi. Estimate the miles of stream to be treated with instream	habitat treatments (to nearest 0.01 mile)
Settimate the percentage of insteam activity costs for card not select carcass/nutrient placements as an instream act <i>Example:</i> Your project will place salmon carcasses. You e cost will apply to instream habitat activities and one half will apply to the carcass placement, you would report 509	tivity, leave this value blank. stimated that 25% of the total project of the instream improvements costs
Riparian Habitat: Projects above the ordinary high-water mark of th the stream. Check all proposed activities.	e stream and within the floodplain of
Riparian planting	
Non-native/noxious plant control	
Riparian exclusion fencing	
Vegetation management (e.g. prescribed burnings, stand thinnir	ng, stand conversions, silviculture)
Livestock exclusion by means other than fencing (includes placin vehicles, etc., but not for individual plant protection)	g obstacles to exclude livestock, people,
Debris/structure removal (OWEB funds cannot be used for generation of the second secon	ral trash removal)
Water gap development (fenced livestock crossing or livestock k	oridge)
Other (explain): DO NOT report livestock water developm developments under upland habitat treatments.	nents here, report livestock water
<u>32</u> % Estimate the percentage of total cost of the project app	lied to riparian habitat activities
<u>0</u> ac. Estimate the acres of riparian habitat to be planted (to	nearest 0.1 acres)
<u>0</u> ac. Estimate the acres of riparian habitat to be treated for racres)	non-native/noxious weeds (to nearest 0.1
<u>4.5</u> ac. Estimate the total riparian acres to be treated. (to near	est 0.1 acres)
<u>.40</u> mi. Estimate the miles of riparian streambank to be treated	l (to nearest 0.01 mi).
Stream sides treated $igsqceent$ 1 \higgardown 2 (Do not double count miles if a sec	cond side is treated)

Upland Habitat: Projects implemented above the floodplain. Check all proposed activities.						
Planting/seeding for erosion control (e.g., convert from crops to native vegetation, plant area where non- native/noxious weeds removed, grassed waterways, windbreaks, filter strips) List scientific names of plants						
Livestock Manure Management (e.g., feedlot improvements to reduce runoff , relocate/improve manure holding structures and manure piles to reduce/eliminate drainage into streams)						
Slope stabilization (e.g., grade stabilization, landslide reparation, terracing slopes)						
🔀 Upland Livestock Management (other than livestock water developments), e.g., grazing plans, fencing						
Non-native/noxious plant control						
List scientific names of plants:						
Restore Historic Upland Habitats (e.g. oak woodland, oak savannah, upland prairie restoration)						
Juniper removal/control						
Livestock/Wildlife Water Developments						
Vegetation Management (other than non-native/noxious plant control or juniper removal, e.g. tree thinning, brush control, burning) List scientific names of plants:						
Erosion control structures not already reported under Upland Agriculture Management or Road Drainage System and Surface Improvements.						
 Upland Agriculture Management (e.g., no/low-till, wind breaks, filter strips, crop rotation, terracing, water and sediment control basins, grade stabilization and irrigation improvements) Other (explain): 						
<u>68</u> % Estimate the percentage of total cost of the project will apply to upland habitat activities						
<u>1</u> # Estimate the number of livestock/wildlife water developments						
0 ac. Estimate the acres of upland habitat to be treated for non-native/noxious plants (to nearest 0.1 acres)						
12.6 ac. Estimate the total acres of upland habitat to be treated (do not include acres of upland habitat						
affected by livestock water developments (to nearest 0.1 acres)						
 Setimate the percentage of upland activity costs applied to Livestock Manure Management. If you do not select Livestock Manure Management as an upland activity, leave this value blank. Example: Project will relocate a feedlot to reduce livestock manure runoff. You estimated that 33% of the total project cost will apply to upland habitat activities and one half of the upland improvements costs will apply to the feedlot relocation, you would report 50%. 						
Road Activities: Projects designed to improve road impacts to watersheds. Check all proposed activities.						
Road drainage system and surface improvements & reconstruction						
Other (explain):						
Road closure, relocation, obliteration (decommissioning)						
8 Stimate the percentage of total cost of the project applied to road activities						
mi. Estimate the miles of road treated (to nearest 0.01 mile)						
Urban Impact Reduction: Check all of the urban impact related activities that will be used by this project.						
Toxin reduction: list names of each toxic species, element or material:						

 Bioswales Pesticide reduction: list names of each Detention Facility Stormwater/wastewater modification Other urban impact reduction (explain) 	or treatment (includes rain gardens)
above. Do not select limiting factors address	
Pesticides Toxics Nutrients Sedime Other (explain):	ed Oxygen Heavy Metals High Temperature nt cost of the project applied to urban impact activities
	ate or improve wetland areas. Check all proposed activities.
 Wetland planting Artificial wetland area created from an area not formerly a wetland 	 Non-native/noxious/invasive plant control Wetland improvement/restoration of existing or historic wetland (other than vegetation planting or removal) Other (explain):
% Estimate the percentage of tot	al cost of the project applied to wetland habitat activities
ac. Estimate the acres of wetland l nearest 0.1 acres)	nabitat to be treated for non-native/noxious/invasive plants (to
ac. Estimate the acres of artificial v	wetland created (to nearest 0.1 acres)
ac. Estimate the total acres of wet	land habitat (existing or historic) treated (to nearest 0.1 acres)
Estuarine Habitat: <i>Projects that result in in</i> Check all proposed activities.	mprovement or increase in the availability of estuarine habitat.
 Estuarine planting Non-native/noxious plant control Dike or berm modification/removal Estuarine culvert modification/removal Removal of existing fill material Exclusion devices 	 Channel modification/creation (e.g., improve intertidal flow to existing estuarine habitat) Creation of new estuarine habitat where one did not exist previously by methods other than tidegates or dikes Placement of fill material (for proper terrestrial function) Other (explain):
% Estimate the percentage of tota	l cost of the project applied to estuarine habitat activities
	habitat to be treated for non-native/noxious plants (to nearest 0.1
ac. Estimate the total acres of estua acres)	arine habitat (existing or historic) to be treated (to nearest 0.1

Section 3.

Salmon/Steelhead Populations Targeted and Expected Benefits to Salmon/Steelhead The information provided will be used by OWEB better to meet federal and state reporting requirements. Completion of this section is required but will not be used to evaluate this application for funding.

This project is NOT specifically designed to benefit salmon or steelhead. If you check this box, STOP here.

Targeted Salmon/Steelhead Populations: Select one or more of the salmon ESUs (Evolutionary Significant Unit) or steelhead DPSs (Distinct Population Segment) that the project will address/benefit. For species where the ESU/DPS name is not known or determined, use the species name with unidentified ESU (e.g., Chinook salmon – unidentified ESU). Additional information on the designation and location of the salmon/steelhead populations can be found at:

https://www.westcoast.fisheries.noaa.gov/maps_data/species_population_boundaries.html

Chinook Salmon (Oncorhynchus tshawytscha)	Coho Salmon (O. kisutch)			
Deschutes River summer/fall-run ESU	Lower Columbia River ESU			
Lower Columbia River ESU	Oregon Coast ESU			
Mid-Columbia River spring-run ESU	Southern Oregon/Northern California ESU			
Oregon Coast ESU	unidentified ESU			
Snake River Fall-run ESU				
Southern Oregon and Northern California	Steelhead (O. mykiss)			
Coastal ESU	Klamath Mountains Province DPS			
Upper Klamath-Trinity Rivers ESU	Snake River Spring/Summer-run ESU			
Upper Willamette River ESU	Lower Columbia River DPS			
unidentified ESU	Middle Columbia River DPS			
	Oregon Coast DPS			
Chum Salmon (O. keta)	Snake River Basin DPS			
Columbia River ESU	Washington Coast DPS (SW Washington)			
Pacific Coast ESU	Upper Willamette River DPS			
unidentified ESU	Steelhead/Trout unidentified DPS			

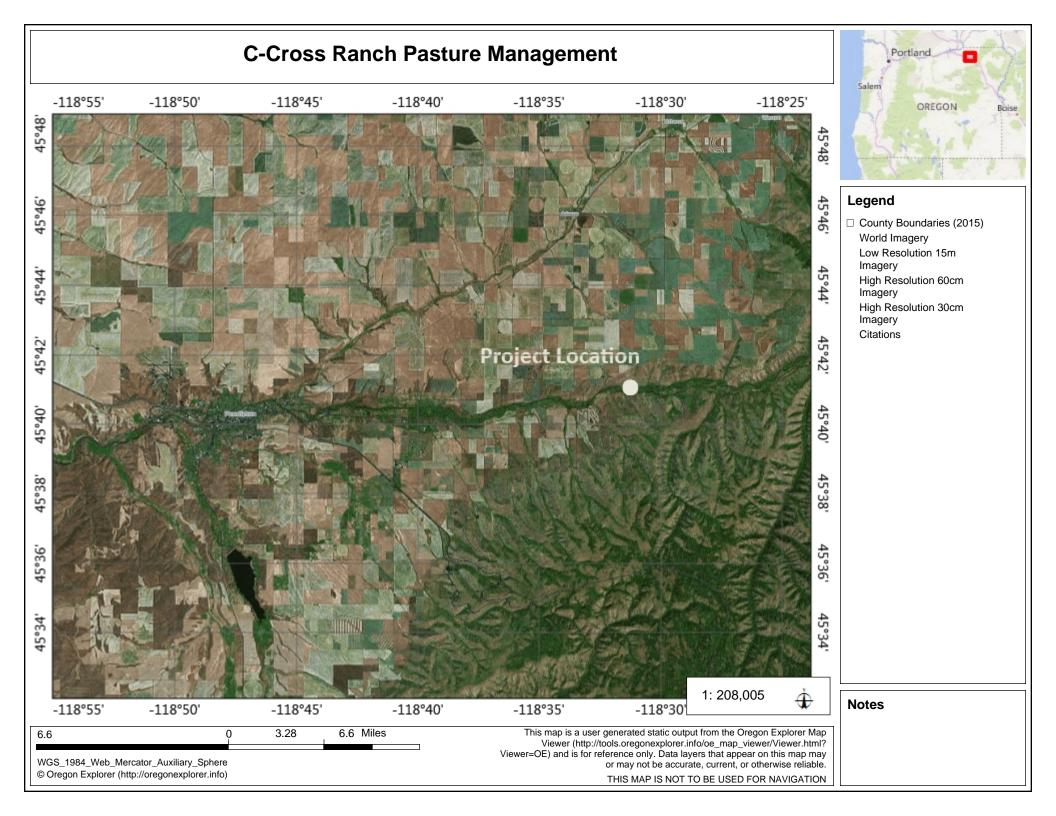

Expected Benefits: Write a brief description of the goals and purpose of the project and how it is expected to benefit salmon/steelhead or salmon/steelhead habitat. **See Application Instructions for helpful examples.**

Fencing and an off-channel watering facility to exclude cattle from the riparian area and Umatilla River on the property will reduce erosion of streambanks, damage to vegetation, and nutrient deposition into the waterway. Sediments, lack of shade, and excess nutrients in rivers degrade Chinook salmon and steelhead habitat in the Umatilla River.

10. Project Budget- Itemize projected costs for each of the following "Expense Categories" that apply to your project. A minimum of 25% match is required. See application instructions and additional team conditions for further guidance.

Totals automatically round to the nearest dollar. Please do not include cents.					
Expense Category	No. of Units	Unit Cost	OWEB Funds	Match Funds	Description what will be purchased or done and who will provide the item/perform the work
	fers to in-h	ouse staff/app	licant employee	s for whom pay	roll taxes are paid. List position titles; include only costs
of employees charged to this grant.
