Township, Range, Section(s)

Subbasin(s) – Please note the 10-digit hydrological unit code,

I. GENERAL INFORMATION

OWEB Funds Requested \$7,219.00 Round to nearest dollar Total Project Cost \$ 17,094.00

Round to nearest dollar

Name of Project (five words or fewer) Padberg Pasture Enhancement Phase II

Project Location (if more than one, include location/landowner information on each map) Multiple sites

This project occurs at (check one): Willow Creek Watershed(s)

 \land A single site Morrow County or counties

119.414, 45.221 Longitude, Latitude (e.g., -123.789, 45.613) (Required for federal/state reporting)

River or Creek Name (if applicable)

1. Have you previously submitted an application to OWEB, either through the regular or small grant program, for this project, or one similar to it on the same property? ⊠ Yes Grant #26-14-005 □ No If yes, explain 5,400 ft. of cross-fence was installed.

2. Does this application propose a grant for a property in which OWEB previously invested funds for purchase of fee title or a conservation easement; or is OWEB currently considering an acquisition grant for this property?

□ Yes Grant #____ ⊠ No

If yes, explain

III. PROJECT INFORMATION	l			
Priority Watershed Concern: the	e project will address—Check <u>One</u> O	nly:		
Instream Process & Function	□ Riparian Process & Function	Urban Impact Reduction		
Wetland Process & Function	Road Impact Reduction	Upland Process & Function		
Fish Passage	□ Water Quantity & Quality/ Irrigation	n Efficiency		
1-a. Is the project consistent with	the local waters hed assessment or ac	ction plan?		
Yes Name primary asser	ssment/plan Umatilla/Morrow Subba	asin Plan		
N/A—The watershed does n	not yet have an assessment or action plan	n		

1-b. Is the project consistent with the local Agricultural Water Quality Management Area Plan? Xes No

1-c. Is the project consistent with any developed plan for the property (e.g., local conservation or stewardship plans, etc.)? Xes No
If yes, name the plan(s): CStP (NRCS)

2. Describe the current *watershed* <u>PROBLEM(s)</u> you are seeking to address.

Currently shane runs 52 pair and 2 bulls on this ranch annually (down from 60 pair - Phase I). Shane and his father inherited this ranch from Shane's grandfather in 2012, and have been trying to get the property back in good shape. The range had been "hammered" according to Shane. With Phase I complete, a grazing schedule was employed to utilize the newly installed cross-fences. The ranch went from essentially one field to four distinct pastures. Phase II would create another 200 AC pasture that could be used in the rotation.

3. Describe the <u>SOLUTION(s)</u> you are proposing to address the current problem(s). Attach a site map, color photo(s), and (if applicable) preliminary project drawings or designs

8,750 ft. of 3 strand barbed wire fence will be installed to enhance the existing grazing plan for the property. This will only amplify the current system to limit chemical inputs from livestock in Clark's Creek (bacteria, nitrates, organic materials, etc.). Overall plant health and vigor should get a boost from the additionl rotation and a more uniform landscape should be realized with regards to available forage. The fence will be installed to NRCS standards and specifications.

4. Technical Guidance Source (check at least one and identify the Practice Code, or page and paragraph).

NRCS Field Office Technical Guide	Guide to Placing Large Wood in Streams
Practice Code 382	Page # / Para
Oregon Road/Stream Crossing Restoration Guide	Forest Practices Tech Note #4
Page # / Para	Page # / Para
□ Nonpoint Source Pollution Control Guidebook	Forest Practices Tech Note #5
Page # / Para	Page # / Para
Urban Subwatershed Restoration Manual	Tribal Natural Resource Plans and Water Plans (attach the
Page # / Para	relevant page or pages)

5. Maintenance and Post-Implementation Monitoring

a) Project maintenance is the responsibility of the landowner. What aspects of the project will be <u>maintained</u>? (See application instructions.)

Who will maintain?	What will be maintained?	How will it be maintained?	# of years # of times/year	
Landowner	ndowner Fence		15-20 yrs - as needed/yr.	

b) Post-implementation monitoring including photo points and visual inspection is <u>required</u> for small grants (Year-Two Status Report). What (if any) additional aspects of the project will be monitored post-implementation? (See application instructions)

Who will monitor?	What will be monitored?	Cite monitoring protocols	# of years # of times/year
Morrow SWCD	Fence	NRCS standards/specs.	as needed/ once at YR2
		completion/YR2 reports	

6. Who will be responsible for writing the Year-Two Status Report?

Name: Kevin Payne		Org.: Morrow SWCD	
Mailing Address: PO Box 127	Heppner, OR		Zip: 97836
Phone: 541-676-5452 Email:		kevin.payne@or.nacdne	et.net

7. Have the required permits been obtained for the project? Yes No X Not Required If yes, what permits have been issued? (Attach copies) _____

If no, what permits must be obtained and by when?

8. Is this project required as a condition of a local, state, or federal permit, order, or enforcement action (e.g., a manure storage and management project required by ODA permit)?

🗌 Yes 🛛 No

9. Project Partners. Show all anticipated funding sources, and indicate the dollar value for cash or in-kind contributions. Be sure to provide a dollar value for each funding source. If the funding source is providing in-kind contributions, briefly describe the nature of the contribution in the Funding Source Column. In the Amount/Value Column, provide a total dollar amount or value for each funding source.

Funding Source	Cash	In-	Amount/
Name the partner and contribution		Kind	Value
OWEB: Fencing materials, project admin. and reporting	X		7,219.00
Landowner: Fence installation and county land use form		Х	9,675.00
Morrow SWCD: project management		Х	200.00
Total Estimated Funds (add all amounts in the far right column)			\$17,094.00

The total should equal the total cost of the project on page 1

10. Project Budget (Word)—Itemize projected costs for each of the following "Expense Categories" that apply to your project. A minimum of 25% match—cost share—in-kind/cash is required. See application instructions and additional team conditions for further guidance.

<u>PLEASE NOTE:</u> Budgets may be submitted in either Word or Excel (form on website) formats. <u>http://www.oregon.gov/OWEB/GRANTS/smgrant_forms.shtml</u>

Fill in the amounts, rounded to the nearest dollar, please <u>do not</u> include cents.

Expense Category	No. of Units	Unit Cost	OWEB Funds	Cost Share In-Kind/ Cash(Match)	Description <u>what will be purchased or done</u> and who will provide the item/perform the work

We, the undersigned, attest that to the best of our knowledge the information contained in this application is true, that the proposed project is not required by a state or federal agency directive, and that the project will be completed within 24 months from the date of the team funding recommendation of the application. We understand that the submitted application is a matter of public record.

Also, should funding for this project be awarded we understand:

- 1) We may not incur any project expenses until all designated signatories have signed an OWEB grant agreement,
- 2) we will be required to provide proper accounting of project expenses, and
- 3) we will be required to provide necessary and normal maintenance to sustain the value of the project once it is completed.

By their signatures, the **landowner**(s) attest that they have no plans to sell their property as of the date of this application, are authorized to sign as landowner, and they agree to provide, upon prior request and at a mutually acceptable time, site access to the applicant or representatives of OWEB for a period up to two years following project completion to allow project work to be implemented, monitored, and maintained.

		ATTACHMENT CHECKLIST
		Project location map (Required)
Applicant	Date	Color photographs of site (Required)
		Site drawings/diagrams (if applicable)
		Juniper Checklist (if applicable)
Landowner	Date	Cooperative agreement, if 2 or more landowners
		(Optional)
		May be submitted in lieu of ALL Landowner
Fiscal Agent	Date	signatures on Application
		ALL Landowners must sign the Grant Agreement
		Racial and Ethnic Impact Statement (Required)
		Restoration Metrics form (Required)
		Other materials (as required by team)
		OPTIONAL FORMS AT APPLICATION STAGE
		(Required at the time of payment request, see
		instructions)
		☐ Irrigation Efficiency
		Culvert/Stream Crossing
		Secured Match
		☐ Land Use

Racial and Ethnic Impact Statement

This form is used for information purposes only and must be included with the grant application.

Chapter 600 of the 2013 Oregon Laws require applicants to include with each grant application a racial and ethnic impact statement. The statement provides information as to the disproportionate or unique impact the proposed policies or programs may have on minority persons¹ in the State of Oregon if the grant is awarded to a corporation or other legal entity other than natural persons.

1. The proposed grant project policies or programs could have a disproportionate or unique positive impact on the following minority persons:

Indicate all that apply:

Women
Persons with Disabilities
African-Americans
Hispanics
Asians or Pacific Islanders
American Indians
Alaskan Natives

2. The proposed grant project policies or programs could have a disproportionate or unique negative impact on the following minority persons:

Indicate all that apply:

Women
 Persons with Disabilities
 African-Americans
 Hispanics
 Asians or Pacific Islanders
 American Indians
 Alaskan Natives

3. X The proposed grant project policies or programs <u>will have no</u> disproportionate or unique impact on minority persons.

If you checked numbers 1 or 2 above, on a separate sheet of paper, provide the rationale for the existence of policies or programs having a disproportionate or unique impact on minority persons in this state. Further provide evidence of consultation with representative(s) of the affected minority persons.

I HEREBY CERTIFY on this 4th day of August, 2016, the information contained on this form and any attachment is complete and accurate to the best of my knowledge.

Signature:

Printed Name:Kevin D. Payne

Title:Natural Resource Technician

¹ "Minority persons" are defined in SB 463 (2013 Regular Session) as women, persons with disabilities (as defined in ORS 174.107), African-Americans, Hispanics, Asians or Pacific Islanders, American Indians and Alaskan Natives.

RESTORATION METRICS FORM

OWEB receives a portion of its funds from the federal government and is required to report how its grantees have used both federal and state funds. The information you provide in the following form will be used for federal and state reporting purposes.

Please complete all portions of the form below as they apply to your project and submit all pages (do not exclude any pages). Please provide specific values, do not enter values like "2-3" or "<100". Enter your best approximation of what the project will accomplish.

If you have any questions, please contact Cecilia Noyes, OWEB Federal Reporting Coordinator, at 503-986-0204 (cecilia.noyes@state.or.us) or Ginger Lofftus, OWEB PCSRF Reporting Assistant, at 503-986-5372 (ginger.lofftus@state.or.us)

Section 1 - Project Overview

Answer all five questions below, even if you have answered a similar question in a previous section in the grant application.

1. Land Use Setting: CHECK ONE BOX ONLY.

Urban/Suburban/Exurban (Projects located within urban	Rural (Projects located outside urban growth
growth boundaries or rural residential areas)	boundaries or rural residential areas.)

2. Dominant Watershed Setting: CHECK ONE BOX ONLY. <u>Example:</u> Your project involves managing erosion in the upland area with some erosion control extended to the riparian area. Because most of the work is to occur in the upland area, you would check <u>only</u> the Upland box below.

Estuary (<i>v</i> of ocean t	vhere freshwater meets and mixes with saltwater ides.)		Riparian (adjacent to a water body, within the active floodplain.)
		Χ	Upland (above the flood plain.)
☐ Instream (below the ordinary high-water mark or within the active channel — includes fish passage.)		Groundwater (Projects that recharge groundwater or primarily affect the subsurface water table.)	
Wetland (areas inundated or saturated by surface or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions.			

3. Total Acres Treated: 200Total Stream Miles Treated:

(do not include upstream stream miles made accessible to fish with passage improvements)

- 4. **Project Monitoring:** All OWEB funded restoration projects require post-implementation status reporting including photo point monitoring. Please indicate below: 1) the location of the monitoring activities relative to the project, including photo point locations, 2) whether effectiveness monitoring is planned, and 3) whether additional monitoring will be conducted for this project.
 - **4.1**) Identify the location for the planned monitoring activities relative to the restoration project location. Check as many boxes as apply.

🛛 Onsite	Downstream	Upstream	Upslope

4.2) Effectiveness monitoring will be conducted for this project. Please note that effectiveness monitoring cannot be funded with OWEB Small Grant Funds. To review effectiveness monitoring and post-implementation status reporting definitions click on the link to the OWEB Web site below.

http://www.oregon.gov/OWEB/MONITOR/effective monitoring.shtml

4.3) Will this project conduct monitoring activities beyond the required post-implementation status reporting and photo point monitoring?

Yes I No If you answer yes, select the monitoring activities below, if you answer no proceed to Section 2.

cheek an proposed nonitoring activities	
Adult Fish presence/absence/abundance/distribution survey(s)	□ Spawning surveys
Juvenile Fish presence/absence/abundance/distribution survey(s)	Upland vegetation (Presence/Absence)
Instream Habitat surveys	□ Water quality
☐ Macroinvertebrates	□ Water quantity
Noxious weed (Presence/Absence)	Photo Points
Riparian vegetation (Presence/Absence)	Other (explain):

Check all proposed monitoring activities

Section 2 - Project Activities

Provide values for each Project Activity applicable to your application. Leave blank any Project Activity or metric line that is not appropriate to your application. All data entered in this form should be what you plan to do with the project. Data about completed projects will be reported at the end of the project to the Oregon Watershed Restoration Inventory (OWRI). For each activity type where you enter metrics, estimate the percentage of the total cost of the project (OWEB and <u>all</u> other funding sources, shown in III. 9.. of this application) that applies to the activity. The sum of all of the activity cost percentages should equal 100%. Please distribute all administrative, project management and other general project costs among the various project activities when estimating percentages.

Example: A project will remove a fish passage barrier, place large boulders instream, and planta riparian buffer. You would enter the appropriate metrics into the Fish Passage, Instream Habitat, and Riparian Habitat activity sections of this form. Then, estimate the percentage of the total cost of the project for each activity. For instance: 20% towards Fish Passage activities, 25% towards Instream Habitat activities, and 55% towards Riparian Habitat activities.

Fish Screening Projects: Projects that result in the installation or improvement of screening systems that prevent fish from passing into areas that do not support fish survival, for example, into irrigation diversion channels.

Note: OWEB funds cannot be used for fish screening projects

% Estimate the percentage of total cost of the project applied to fish screening activities

New Fish Screens Installed

- # Estimate the number of <u>new</u> screens installed (do not count diversions where existing screens are replaced)
- _____cfs Estimate the cubic feet per second of flow influenced by <u>new</u> screen(s) installed (to nearest 0.01 cfs)

Existing Screens Replaced, repaired or modified

- # Estimate the number of existing screens replaced, repaired or modified
- _____cfs Estimate the cubic feet per second of flow influenced by <u>existing</u> screen(s) screens (to nearest 0.01 cfs)

Fish Passage Improvement: Projects that improve fish migration by addressing a migration barrier problem.

Complete sections A-E as they apply to the proposed project. For projects that improve fish passage at road crossings complete both sections A (define the problem) and B (define the treatment). Non-road crossing improvements are reported in sections C and D. Section E should be completed for all fish passage improvement projects. Refer to the application instructions for additional information and examples.

A. Road Crossings – Define *Existing* Fish Passage Problem

1. Culverts hindering fish passage	# crossings
2. Bridges hindering fish passage	# crossings
3. Fords hindering fish passage	# crossings

B. Road Crossings - Define the Fish Passage Improvements to be implemented by this project

1. Culverts installed/improved - Improvements include installing baffles inside culverts or installing/improving engineered bypasses (e.g. weirs) directly below a culvert outlet to improve passage.	# crossings	str. mi with improved access*
2. Bridges installed/improved - Improvements include installing/improving engineered bypasses (e.g. weirs) directly below a bridge crossing to improve passage.	# crossings	str. mi with improved access*
3. Fords installed/improved	# crossings	str. mi with improved access*
4. Road Crossings removed and <u>not</u> replaced	# crossings	str. mi with improved access*

*Estimate stream miles in the main channel and tributaries made more accessible above the crossing(s) (to nearest 0.01 mile). If a barrier exists upstream, report the length made accessible up to that next upstream barrier.

C. Fish Passage Barriers – Other than Road Crossings

1. Type(s) of barriers to be treated/removed to improve fish passage.	 Diversion Dam Push-up Dam Wood or Concrete Dam Weir (not associated with a road crossing) Logs Debris Boulder/Rock Barrier (not weirs)
	Other (explain)
2# Estimate the total number of non-road crossing barriers (listed above) to be removed or altered to improve passage.	

D. Fish Ladders or Engineered Bypasses (not associated with Road Crossings)

1. Fish ladders will be installed/improved	# fish ladders to be installed/improved
2. Engineered bypasses will be installed/ improved. This includes weirs, rock boulder step pools, and chutes constructed/roughened in bed rock. Do not count engineered bypasses located at a road crossing to improve passage at the crossing. These types of improvements should be identified above in section B as a Road Crossing Fish Passage Improvement.	# engineered by passes to be installed/improved

E. Fish Passage Summary Metrics

- 1.____% Estimate the percentage of total cost of the project applied to fish passage improvements
- 2. _____mi Estimate the total stream miles that will be made more accessible in the main channel and tributaries above the project (to nearest 0.01 mile). This metric summarizes the stream miles for all of the proposed passage improvements (defined above in Sections A-D). If a barrier exists upstream of the project, report the length made accessible up to that next upstream barrier.
- 3. ____# Estimate the total number of barriers (this includes road crossings, diversion dams, push up dams, wood or concrete dams, weirs, etc.) to be removed or altered to improve passage.

Instream Flow: *Projects that maintain and/or increase the instream flow of water*. Irrigation improvements that are primarily designed to improve water quality should be reported under Upland – Agriculture Management.

Check all proposed activities.

☐ Irrigation practice improved to increase instream flows (e.g. install diversion headgate, replace open ditches with pipes)	Water flow gauges installed to measure water use	
☐ This project will dedicate instream flow.	Other (explain):	
% Estimate the percentage of total cost of the project applied to instream flow activities		
mi. Estimate the miles of stream where increased flow is the result of decreased/eliminated water withdrawals		

_____cfs Estimate the increase in flow of water in the stream as a result of conservation effort (cubic feet per second)

_____mm/dd/yyyy Initial start date of irrigation practice improvement

_____mm/dd/yyyy Final end date of irrigation practice improvement (if improvement is permanent enter 12/31/9999)

_____mm/dd/yyyy Water lease/agreement initial start date of no withdrawal

_____mm/dd/yyyy Water lease/agreement final end date of no withdrawal (if lease/agreement is permanent, enter 12/31/9999)

Instream Habitat: *Projects that are designed to improve instream habitat conditions.*

Check all proposed activities.

Channel reconfiguration and connectivity (e.g., creating instream pools, meanders, improving floodplain connectivity, off-channel habitat, removal or alteration of levee or berm, removal of sediment)	Spawning gravel placement
Channel structure - large wood placement	Plant Removal/control (instream) List scientific names of plants
Channel structure - boulder placement	 □ Carcass or nutrient placement: □ salmonid carcass; □ fish meal brick; □ other nutrient
Channel structure placement (<u>other</u> than large wood or boulder placements), e.g., engineered structures or deflectors, barbs, weirs, etc.	Other (explain):
Streambank stabilization through resloping and/or placing rocks, logs (e.g. revetments, gabions, barbs), or bioengineering on streambank	

% Estimate the percentage of total cost of the project applied to instream habitat activities

mi. Estimate the miles of stream to be treated with instream habitat treatments (to nearest 0.01 mile)

% Estimate the percentage of insteam activity costs for carcass or nutrient placements. If you do not select carcass/nutrient placements as an instream activity, leave this value blank. *Example: Your project will place salmon carcasses. You estimated that 25% of the total project cost will apply to instream habitat activities and one half of the instream improvements costs will apply to the carcass placement, you would report 50%.*

Riparian Habitat: Projects above the ordinary high-water mark of the stream and within the floodplain of the stream. Check all proposed activities.

□ Riparian planting	Non-native/noxious plant control	
Riparian exclusion fencing	Vegetation management (e.g. prescribed burnings, stand	
	thinning, stand conversions, silviculture)	
Livestock exclusion by means other than fencing (includes	Debris/structure removal (OWEB funds cannot be used	
placing obstacles to exclude livestock, people, vehicles, etc.,	for general trash removal)	
but not for individual plant protection)		
□ Water gap development (fenced livestock crossing or	Other (explain): Do not report livestock water	
livestock bridge)	developments here, report livestock water developments under	
	upland habitat treatments.	
Conservation grazing management (e.g., rotation grazing)		
% Estimate the percentage of total cost of the project applied to riparian habitat activities		

_____ac. Estimate the acres of riparian habitat to be planted (to nearest 0.1 acres)

ac. Estimate the acres of riparian habitat to be treated for non-native/noxious weeds (to nearest 0.1 acres)

_____ac. Estimate the total riparian acres to be treated. (to nearest 0.1 acres)

_____mi. Estimate the miles of riparian streambank to be treated (to nearest 0.01 mi). Stream sides treated 🗌 one 🗌 two

(Do not double count miles if a second side is treated)

Upland Habitat: Projects implemented above the floodplain. <u>Check all proposed activities</u>.

 Planting/seeding for erosion control (e.g., convert from crops to native vegetation, plant area where non-native/noxious weeds removed, grassed waterways, windbreaks, filter strips) List scientific names of plants 	Livestock Manure Management (e.g., feedlot improvements to reduce runoff, relocate/improve manure holding structures and manure piles to reduce/eliminate drainage into streams)
Slope stabilization (e.g., grade stabilization, landslide reparation, terracing slopes)	Livestock/Wildlife Water Developments
Non-native/noxious plant control; List scientific names of plants:	Upland Livestock Management (<u>other</u> than livestock water developments), e.g., grazing plans, fencing
Juniper removal/control	Restore Historic Upland Habitats (e.g. oak woodland, oak savannah, upland prairie restoration)
Vegetation Management (<u>other</u> than non-native/noxious plant control or juniper removal, e.g. tree thinning, brush control, burning)	Trail or Campground Improvements (to decrease upland erosion; these may extend into the riparian zone)
List scientific names of plants:	
List scientific names of plants: Upland Agriculture Management – (e.g., no/low-till, wind breaks, filter strips, crop rotation, terracing, water and sediment control basins, grade stabilization and irrigation improvements)	Other (explain):

100 % Estimate the percentage of total cost of the project will apply to upland habitat activities

Estimate the number of livestock/wildlife water developments

_____ac. Estimate the acres of upland habitat to be treated for non-native/noxious plants (to nearest 0.1 acres)

200_ac. Estimate the total acres of upland habitat to be treated (do not include acres of upland habitat affected by livestock water developments (to nearest 0.1 acres)

% Estimate the percentage of upland activity costs applied to Livestock Manure Management. If you do not select Livestock Manure Management as an upland activity, leave this value blank. *Example: Your project will relocate a feedlot to reduce livestock manure runoff. You estimated that 33% of the total project cost will apply to upland habitat activities and one half of the upland improvements costs will apply to the feedlot relocation, you would report 50%.*

Road Activities: Projects designed to improve road impacts to watersheds. Check all proposed activities.

Road drainage system and surface improvements & reconstruction	Other (explain):
Road closure, relocation, obliteration (decommissioning)	

_% Estimate the percentage of total cost of the project applied to road activities

____mi. Estimate the miles of road treated (to nearest 0.01 mile)

Urban Impact Reduction: Check all of the urban impact related activities that will be used by this project:

Toxin reduction: list names of each toxic species, element or	Bioswales
material:	
Pesticide reduction: list names of each pesticide:	Detention Facility
Stormwater/wastewater modification or treatment (includes rain gardens	Other urban impact reduction (explain):

Check all of the water quality limiting factors addressed by the Urban Impact Reduction activities selected above. Do not select limiting factors addressed by other types of restoration activities:

🗆 Bacteria	Pesticides	□ Nutrients
Dissolved Oxygen	Toxics	Sediment
Heavy Metals	High Temperature	Other (explain):

_% Estimate the percentage of total cost of the project applied to urban impact activities

Wetland Habitat: Projects designed to create or improve wetland areas. Check all proposed activities.

U Wetland planting	Artificial wetland area created from an area not formerly a wetland
Non-native/noxious/invasive plant control	Other (explain):
Wetland improvement/restoration of existing or historic wetland (other than vegetation planting or removal)	

____% Estimate the percentage of total cost of the project applied to wetland habitat activities

ac. Estimate the acres of wetland habitat to be treated for non-native/noxious/invasive plants (to nearest 0.1 acres)

_____ac. Estimate the acres of artificial wetland created (to nearest 0.1 acres)

ac. Estimate the total acres of wetland habitat (existing or historic) treated (to nearest 0.1 acres)

Estuarine Habitat: Projects that result in improvement or increase in the availability of estuarine habitat.

Check all proposed activities.

Estuarine planting	□ Non-native/noxious plant control		
Channel modification/creation (e.g., improve intertidal flow to existing estuarine habitat)	Creation of new estuarine habitat where one did not exist previously by methods other than tidegates or dikes		
Dike or berm modification/removal	Estuarine culvert modification / removal		
Removal of existing fill material	Exclusion devices (commonly includes fencing, installation of mooring buoys, boardwalks/trails, etc. to keep public/animals away)		
Placement of fill material (for proper terrestrial function)	Other (explain):		

% Estimate the percentage of total cost of the project applied to estuarine habitat activities

ac. Estimate the acres of estuarine habitat to be treated for non-native/noxious plants (to nearest 0.1 acres)

ac. Estimate the total acres of estuarine habitat (existing or historic) to be treated (to nearest 0.1 acres)

<u>Section 3 - Salmon/Steelhead Populations Targeted and Expected Benefits to</u> <u>Salmon/Steelhead</u>

The information provided will be used by OWEB to better meet federal and state reporting requirements. Completion of this section is required but will not be used to evaluate this application for funding.

This project is **NOT** specifically designed to benefit salmon or steelhead.

If you check this box, STOP here.

<u>**Targe ted Salmon/Steelhead Populations</u>**: Select one or more of the salmon ESUs (Evolutionary Significant Unit) or steelhead DPSs (Distinct Population Segment) that the project will address/benefit. For species where the ESU/DPS name is not known or determined, use the species name with unidentified ESU (e.g., Chinook salmon – unidentified ESU). Additional information on the designation and location of the salmon/steelhead populations can be found at: http://www.westcoast.fisheries.noaa.gov/maps_data/species_population_boundaries.html</u>

Chinook Salmon (Oncorhynchustshawytscha)			Coho Salmon (O. kisutch)		
	Deschutes River summer/fall-run ESU		Lower Columbia River ESU		
	Lower Columbia River ESU		Oregon Coast ESU		
	Mid-Columbia River spring-run ESU		Southern Oregon/Northern California ESU		
	Oregon Coast ESU		unidentified ESU		
	Snake River Fall-run ESU	Steelhead (O. mykiss)			
	Snake River Spring/Summer-run ESU		Klamath Mountains Province DPS		
	Southern Oregon and Northern California Coastal ESU		Lower Columbia River DPS		
	Upper Klamath-Trinity Rivers ESU		Middle Columbia River DPS		
	Upper Willamette River ESU		Oregon Coast DPS		
	unidentified ESU	Snake River Basin DPS			
Chum Salmon (O. keta)			Washington Coast DPS (SW Washington)		
	Columbia River ESU		Upper Willamette River DPS		
	Pacific Coast ESU	Steelhead/Trout unidentified DPS			
	unidentified ESU				

Expected Benefits:

Write a brief description of the goals and purpose of the project and how it is expected to benefit salmon/steelhead or salmon/steelhead habitat. See Application Instructions for helpful examples.

Padberg Pasture Enhancement Phase II

Looking up "Midway Canyon" where proposed fence will be installed.

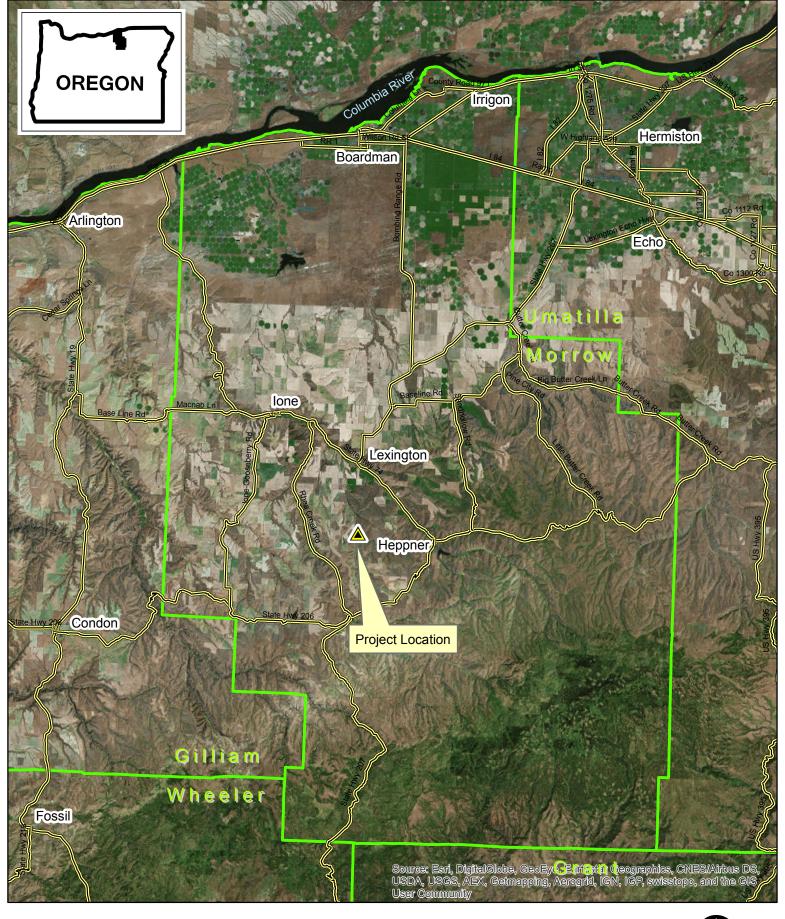

Showing dilapidated posts that once held fence and steel posts used for running electric fence.
